

## ○ 10 x 5" ELLIPTICAL JOEY COIL

This coil has utilised the success of the 10x5" coil for the Gold hunting machines and applied similar results to the coin and relic hunting units. The size and shape of this coil makes it an excellent option for any dry-land terrain whether at the parks or playgrounds or old townships to dry sand at the beaches. It has excellent manoeuvrability for tight areas and it is ultra light weight.

The coils performance is complemented by the tight magnetic field the elliptical coil produces which improves the sensitivity and target separation. With this smaller sized coil, the depth capabilities are not as good as its larger counterparts but you might be surprised with its abilities when swinging. It is very easy to manoeuvre around obstacles and will feel like a breeze to use.

The coil is WATER-RESISTANT so it is not recommended to submerge or use the coil in very wet situations. Water can void your warranty if it is the result of any damage or performance loss. The housing is made from strong ABS plastics, which ensures the coils durability.

When working with this small coil, remember to swing slowly as sometimes these smaller coils make the operators swing faster to cover the ground, but this acts against the coils abilities. Also remember to keep the coil close to the ground as being small it doesn't have the penetration like its larger counterparts. Pinpointing is a lot easier with this smaller coil so just work your way up to the target from different directions and you will ensure you get accurate location for fast retrieval.

### STRENGTHS

- ▶ Easily Manoeuvred
- ▶ Excellent sensitivity
- ▶ Light weight
- ▶ Robust design
- ▶ Good pinpointing ability
- ▶ Best used in drag format
- ▶ Good for trashy areas

**Applicable metal detectors**

- ▶ Minelab Explorer series / Quattro / Etrac / Safari (5 pin plug)
- ▶ Minelab Sovereign Series (6 pin plug)

NOTE: Coil is supplied with a skid plate
